

JEAN KATHLEEN R. VILLEGAS

COMPUTER SCIENCE STUDENT | AI, DATA & WEB DEVELOPMENT

CONTACT

- +639318485632
- villegasjeankathleen@gmail.com
<https://github.com/JeanKatlee>
- Mandaue, Cebu City

TECHNICAL SKILLS

- Programming: Python, Java, C
- Machine Learning & AI: Machine Learning, Scikit-learn, LLMs, Generative AI, Prompt Engineering
- Data & Databases: SQL, MySQL, SQLite, Pandas, NumPy
- Web Development: HTML, CSS, JavaScript, Node.js, Express.js
- IoT & Embedded Systems: Arduino, ESP32, Raspberry Pi
- Tools: Git, GitHub, Docker

LANGUAGES

- English (Fluent)
- Tagalog (Fluent)
- Cebuano (Fluent)

PROFILE

Fourth-year BS Computer Science student majoring in Artificial Intelligence, with academic and project experience in software development, data processing, databases, and AI-assisted applications. Comfortable working with Python, SQL, and JavaScript in guided and independent projects. Detail-oriented, curious, and eager to continue building practical skills in an internship or entry-level role.

EXPERIENCE

PROJECTS & RESEARCH

2024- PRESENT

- Machine Learning Classification Project**

Built a machine learning classification pipeline using Python and Scikit-learn, covering data preprocessing, feature engineering, SVM modeling, and evaluation.

- Mavia** — AI-Powered Audio-Tactile Braille Learning Assistant | ONGOING
Contributing to an AI-assisted system involving LLMs, PDF/text processing, structured data, and adaptive learning.

- Salitayo** — AI-Assisted Language Learning Application

Developed a React-based application with AI-assisted writing analysis, content management, and audio transcription.

Working Scholar | University of San Jose- Recoletos 2023- PRESENT

- Supervised and maintained computer labs for students, ensuring all equipment, software, and hardware were in proper working condition.
- Provided on-the-spot technical support to faculty and students for educational software and research tools.

Web Developer

2024 - PRESENT

- Developed a database-driven reservation system using Node.js, Express, and MySQL, implementing database migrations, validation, authentication, and transactional data updates.
- Developed a 6-solenoid Braille actuator system integrating web, hardware, and MQTT communication for real-time tactile output.

KEY ACHIEVEMENTS

- Co-author — "Leveraging Education through Artificial Intelligence Virtual Assistance: A Case Study of Visually Impaired Learners," International Journal of Educational Innovation and Research, 2023. DOI:
- TleReservation deployed: Built and deployed TleReservation (Node.js, Express, MySQL, Knex, EJS, Docker) for our Junior High School (JHS) department to centralize lab and equipment reservations.
